

# DEXIS FS Ergo

*Flexible Digital Intraoral X-ray Sensor*

*Exceptional comfort for your patients.*

**DEXIS** FS Ergo

## Redefining Comfort with DEXIS Innovation

*DEXIS is the recognized leader in intraoral X-ray imaging for two decades with its PerfectSize™, single-sensor solution. Working side-by-side with clinicians around the world, the DEXIS team has made improving your patient's comfort a top priority.*

Introducing the DEXIS FS Ergo by KaVo—the latest innovation to redefine comfort. The FS Ergo is unlike any traditional digital sensor. Dental professionals can treat their patients to an unparalleled comfortable experience while enjoying the benefits of rigorous testing and durability.

## A New Standard in Patient Comfort

Building upon the award-winning DEXIS PerfectSize™ sensor and TrueComfort™ design, FS Ergo is in a class of its own. By pairing the newly developed flexible sensor technology with a soft housing, FS Ergo can “give” as X-rays are being captured. Even the proprietary holder system is uniquely designed to accommodate the flex of the sensor and adapt to your patient. Imagine a digital sensor that gently cushions your patient’s sensitive anatomy – a new standard in patient comfort.

### Robust Engineering you can Depend on:

#### Sensor Housing

FS Ergo’s sensor housing is highly durable and resistant to a wide variety of disinfection chemicals.

#### Contoured Positioning System

The durable thermoplastic resin of the biteblocks provides a higher tensile strength to withstand normal use, repeated autoclaving and chemical disinfectants. This unique positioning system protects the cable for greater reliability from wear and tear.

#### Cable-To-Sensor Connection

The housing and cable are designed to maintain the integrity of the sensor connection while the cable is actively moved throughout the clinical environment.

*Feel the Difference Yourself*

## DEXIS™

**DEXIS, LLC**

1910 North Penn Road, Hatfield, PA 19440

1-888-883-3947 • [www.dexis.com](http://www.dexis.com)

The DEXIS FS Ergo is designed to adapt and reduce pressure on contact points in the oral cavity to provide a very comfortable experience for your patient. This happens automatically when the sensor is positioned into a patient's mouth. Bending outside of clinical use can reduce the life of the sensor.
